

On-Page SEO

Optimising titles, headings, content and internal links

Title tags

- Unique for every page.
- Main topic early; brand at the end.
- Describe the page honestly — no clickbait.

Headings and content structure

- One H1, descriptive H2/H3s.
- Answer first, detail second.
- Add original value competitors do not have.

Internal linking

- Link from strong pages to important pages.
- Use descriptive anchor text.
- Find and fix orphan pages.

Meta descriptions

- Sell the click: state the benefit.
- Match the query's wording naturally.
- Avoid duplicate descriptions across pages.

URLs, images and media

- Readable, hyphenated URLs.
- Descriptive alt text, not keyword lists.
- Compressed images with set dimensions.

On-page element checklist

Element	Good practice	Common mistake
Title tag	~50–60 characters, topic first, unique	Same title on every page
Meta description	~150–160 characters, clear benefit	Left blank or duplicated
H1	One per page, states the topic	Logo image used as the only H1
URL	/services/web-design	/index.php?p=123&cat;=7
Image alt	"Mobile money checkout on a phone"	"image1" or keyword lists

Before and after: a service page title

Version	Title tag
Before	Home Services Welcome
After	Website Design in Kampala — Fast, Mobile-Friendly Sites PixelWorks

Remember

- Titles and headings tell Google and readers what the page is about.
- Meta descriptions win clicks, not rankings.
- Internal links are the on-page lever most sites underuse.
