

Final Project: SEO Audit & Strategy

Auditing a real website and presenting a prioritised action plan

Audit scope and setup

- Define goals and priority pages.
- Crawl the whole site.
- Record baseline metrics.

On-page and content checks

- Intent match for each priority page.
- Cannibalisation and thin content.
- Content gaps against competitors.

Prioritising and presenting

- Impact × effort matrix.
- 90-day plan with owners.
- Plain-language executive summary.

Technical and page-experience checks

- Indexing and crawl blockers first.
- Redirect chains and broken links.
- Core Web Vitals on key templates.

Off-page and local checks

- Referring domains vs competitors.
- Link-gap opportunities.
- Google Business Profile completeness.

Impact / effort prioritisation

Quadrant	Example	When
High impact, low effort	Fix noindex on the services page	Week 1
High impact, high effort	Rebuild slow product templates	Plan within 90 days
Low impact, low effort	Add missing alt text	Batch when convenient
Low impact, high effort	Redesign a rarely visited page	Defer

Audit deliverables

Deliverable	Contents
Executive summary	Top five issues and expected business impact
Findings log	Issue, evidence, affected URLs, priority
90-day action plan	Tasks, owners, dates, success metrics
Baseline metrics	Indexed pages, clicks, key events, CWV status

Remember

- An audit is only useful if it ends in a prioritised plan.
- Fix crawl and indexing blockers before anything else.
- Explain every recommendation in terms of business impact.
