

Authentication & Authorization — Quick Reference

Backend Development — Resnet Academy

Auth vs Authz

Question	Concept
"Who are you?"	Authentication
"What can you do?"	Authorization

Sanctum Setup Checklist

Step	Command
Install	composer require laravel/sanctum
Publish config/migration	php artisan vendor:publish --provider=...
Migrate	php artisan migrate
Protect a route	Route::middleware('auth:sanctum')

401 vs 403

Code	Meaning
401 Unauthorized	No valid credentials supplied at all
403 Forbidden	Identity known, but action not permitted

Gate / Policy Cheat Sheet

Concept	Usage
Gate::define()	Ad hoc rule not tied to one model
Policy class	Groups rules for one Eloquent model
\$this->authorize()	Throws 403 automatically on failure
\$user->can()	Boolean check in code/views
