

Advanced Backend Development — Quick Reference

Backend Development — Resnet Academy

Queue Commands

Command	Purpose
php artisan make:job X	Scaffold a queued job
X::dispatch(\$args)	Push a job onto the queue
php artisan queue:work	Start a worker to process jobs
php artisan queue:failed	List failed jobs

Scheduling Frequency Methods

Method	Runs
->everyMinute()	Every minute
->hourly()	Once an hour
->daily()	Once a day, midnight
->weekly()	Once a week

Security Checklist

Practice	Why
\$fillable on models	Prevents mass-assignment of unintended fields
throttle middleware	Limits abuse/brute-force attempts
Server-side validation	Client-side checks can be bypassed
APP_DEBUG=false in prod	Avoids leaking stack traces to users

Deployment Checklist

Step	Command
Install deps (no dev)	composer install --no-dev --optimize-autoloader
Run migrations	php artisan migrate --force
Cache config	php artisan config:cache
Cache routes	php artisan route:cache
