

Building REST APIs — Quick Reference

Backend Development — Resnet Academy

RESTful Route Table

Verb	Path	Action
GET	/resource	index
POST	/resource	store
GET	/resource/{id}	show
PUT/PATCH	/resource/{id}	update
DELETE	/resource/{id}	destroy

Validation Rule Cheat Sheet

Rule	Meaning
required	Field must be present and non-empty
string / integer / numeric	Type check
max:N / min:N	Length or value bound
exists:table,column	Value must exist in another table
unique:table,column	Value must not already exist

API Status Codes

Code	Meaning
200	OK
201	Created
204	No Content (delete)
401	Not authenticated
403	Not authorized
404	Resource not found
422	Validation failed

Postman Checklist

Step	Detail
Collection	Group related requests together
Environment	Store base_url and token as variables
Auth	Bearer Token tab for protected routes
Assertions	Check status code + JSON body shape
